Function Based Assignments

1)Write a Java Script arrow function which takes string as parameter and print the reverse string

2)Write an anonymous function which takes string as parameter and count total number of vowels and consonants in that string.

3)Write anonymous function in Java Script which accept array containing numbers and return the sum of numbers.

Hint: numArray=[5,4,1,3,2,7,9]

4)Write a function in java Script which takes digits as a parameter and check this number is palindrome or not

5)Write a java script function to show date and time , seconds will automatically get increased after each second and when it becomes 60then minute will get incremented by one

Like 02:34:45 then 02:34:46 and so on---

When 2:34:60 then output will be 2:35:00 then 02:35:01

Hint: use Date class of java script and use the methods of Date class to perform the above task
